PROFILE

Three years of work-study experience as a developer at Paprec Energie, building web tooling and production data pipelines for a network of 30+ waste-to-energy plants. Python, SQL and TypeScript, equally at home shipping a Flask application or fixing a Grafana dashboard that queries an industrial historian. Looking for a junior backend or analytics engineering role in a remote-first team.

TECHNICAL SKILLS

Languages : Python, SQL (PostgreSQL, T-SQL / SQL Server), TypeScript, C, DAX, HTML / CSS / SCSS

Backend & Web : Flask (application factory, blueprints, SQLAlchemy, CSRF), REST APIs, application security

Data & BI : Grafana, Power BI, AVEVA Historian (InSQL, linked servers, OPENQUERY), Excel automation with PDF export

Tools : Git / GitHub, VS Code, LabVIEW, Gazebo

PROFESSIONAL EXPERIENCE

Apprentice Developer & Analytics Engineer - Paprec Energie

2024 – 2027

La Seyne-sur-Mer, France — 3-year apprenticeship, engineering office

- Build and maintain Grafana dashboards for waste-to-energy plants (Gien, Thiverval, Sete, Saint-Saulve), pulling process data from AVEVA Historian through a SQL Server linked server queried with OPENQUERY.
- Wrote Otnoc_Grafana_Generator, a Python tool that turns an Excel configuration sheet into ready-to-paste Grafana panel code (SQL query, HTML, CSS, JS render logic), so a new site can be set up in minutes instead of by hand.
- Designed a monthly target system (tonnage, electrical and thermal output) that site teams update themselves: one driver panel reads a pasted CSV and pushes six dashboard variables to six satellite panels, built entirely within organisation-admin permissions with no server-side database rights.
- Migrated dashboards from ImaginData to AVEVA Historian across several plants, and produced an anomaly log covering miscalibrated tags, acquisition failures and UTC / local time-zone mismatches.
- Improved the CAPexploitation internal web application used across 30+ sites (TypeScript, SCSS, HTML), built Power BI reports connected to production databases, and automated Excel reporting with PDF generation.
- Wrote the technical documentation other developers rebuild from and the operating procedures the client sites follow, and worked with external subcontractors on industrial digital integrations.

Full-Stack Developer Intern - Kasetsart University

2026

Sakon Nakhon, Thailand — 12 weeks, international internship

- Built a self-hosted Flask platform (application factory, blueprints, SQLAlchemy, CSRF protection, fail-fast secret key guard) that lets a research department annotate retinal fundus and waste-sorting images and export GLCM texture features for machine learning, replacing its reliance on public datasets.
- Delivered the project with full English and French documentation and a conference paper in LNCS format.

Automation Technician Intern - Vandoren

2024

Bormes-les-Mimosas, France — 14 weeks

- Improved machine camera automation on a production line using LabVIEW.

Robotics Technician Intern - Prolexia

2023

La Seyne-sur-Mer, France — 8 weeks

- Integrated and tested new sensors and actuators on a mobile robot, and designed the supporting technical documentation.

EDUCATION

Engineering Degree (MSc level), Digital Systems - SeaTech, University of Toulon

expected 2027

Ranked 1st of the year in first year. Software engineering, industrial data systems, cybersecurity.

BUT Electrical Engineering & Industrial Computing - IUT, University of Toulon

2024

Specialisation in automation and industrial IT.

PROJECTS

- Otnoc_Grafana_Generator - Python code generator for Grafana panels, in production use at Paprec.
github.com/JimmyTRMT/Otnoc_Grafana_Generator
- Dataset_Labeling - Flask image annotation and GLCM feature extraction platform. github.com/JimmyTRMT/Dataset_Labeling
- Robotic arm for a production line simulated in Gazebo (2025), and Garry's Mod game servers written in G-LUA. The game servers are how i learned to write code other people actually use.

LANGUAGES & INTERESTS

Languages French (native), English B2 - TOEIC 875

Interests MMA (Elite Fight Club), judo (1st kyu), football.
